Online Education Finance Management  
Information System

Case Study

## The Client

The client - government of an African country is working with IntelliPro team to develop an online system for students to easily apply and access for education loan for higher studies.

## IntelliPro Approach

IntelliPro team is working with authorities of government to understand the entire process of education loan application in their country and developing a secure and stable system that can be accessed through web thus resulting into paperless and digital loan process.

## Tools/Technologies

- Angular 4 (Visual Studio Code).
- Typescript (Template based).
- .NET Core 2.0 (Restful API).

## Business Scenario

Government of an African country is going digital in all aspects. As a part of this they are developing an online system so that students of the country can apply and access education loan online for higher studies. Thus upbringing the digital era and helping more students to opt for higher education very easily.

## IntelliPro's Solution

Our team has developed the following modules for the system:

- Registration and Login.
- Apply for Loan.
- Check application status.
- Document Management System - for managing all documents required for applying and accessing education loan.
- Inbox (integrated email management) - for secure conversation between authorities and applicant.
- Role and right based access to modules - for securing the sensitive data.
- Admin portal for authorities to manage master modules.
- Comprehensive and detailed reports to access the required information.
